### Helpful Tip:

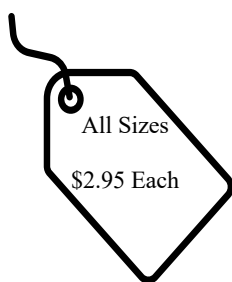

This is used on seat with a groove around the edge. To determine the size needed, measure front to back and side to side. Then, add 2 inches to each dimension. When ordering the width of the cane, this is the depth of the seat, which is the front-to-back measurement. When installing, the sewn edges are placed front and back, to ensure maximum strength of the sheet cane.

Hide glue is recommended for installing. (see page 9)

\*Please note that prices listed are per lineal inch.

### **Helpful Information:**

#### **Shaker Tape Formula**

To determine the correct amount of yardage needed, use this formula:

1. Measure the front rail between the posts.
2. Measure from the center of the back rail to the center of the front rail.
3. Multiply these together.
4. Divide the resulting figure by 9, and that is the number of yards of one inch tape required.

NOTE: If you want to use two colors, order half the total number of yards per color.
